Bald Eagle Nesting

The habitat of Barr Lake's wildlife refuge is perfect for one pair of nesting bald eagles. It has large old cottonwoods for roosting, rich food sources, and little disturbance. A pair of bald eagles has been observed in the refuge, every year, since 1986. As of 2018, Barr Lake bald eagles have fledged 59 young!

Make a date to come to Barr Lake in January and February as they are excellent months for bald eagle viewing. In January, eagles begin courtship behavior including tumbling in mid-air, nest building, and staying close together. In mid-February, and often coinciding with Valentine's Day, bald eagles lay one to three eggs. The parents take turns incubating the eggs, so you are practically guaranteed to see an eagle on the nest. If all goes well, eaglets hatch in late March or early April.

Saturday, January 18th at 11am

Join us for a unique opportunity to view our bald eagle population at its peak! Our guided hike travels to the gazebo and back.
