

Milton Reservoir Water Quality Report

February 12, 2020

Water Summary

Milton Reservoir is sampled twice a month between March and October and monthly between November and February. The Barr Lake and Milton Reservoir Watershed Association coordinates all of the efforts to monitor, test, and improve the water quality in Milton. Regular lake sampling started in 2002 and will continue into the future. It is important to closely monitor water quality to observe any major changes that would impact wildlife, park users, or downstream water users.

February – Milton had open water near the outlet thanks to the aerators that are in use. The rest of the reservoir was covered in ice. Around eight bald eagles were observed around the lake during sampling. Lake level has not changed since January. The big question each year is how much algae will we have in the summer. Is there a way to predict summer time algae levels based on the winter time water quality data? If phosphorus is the driver for algae, then the two things that determine phosphorus levels is the amount of water that is brought in during the winter and the TP concentrations in the S. Platte River by Fort Lupton. Things look promising for 2020 based on this winter's TP levels.

Just like fertilizers, it is best to keep salt out of our lakes and streams. If you do use salt, please use it sparingly and even consider sweeping it up after the snow melts.

Watershed News

BMW is planning out 2020 activities. We are in the process of hiring 1 or 2 interns this summer, we just confirmed the bike tour date (6/18), Lake Appreciation Day at Barr is July 11th, and a big shoreline clean-up will be on National Public Lands Day (9/26). Next Stakeholder meeting is February 25th at Barr Lake.

Join BMW Association

BARR LAKE AND MILTON RESERVOIR ASSOCIATION

The BMW Association's mission is to improve the water quality by encouraging cooperation, involvement, and awareness with people living near and upstream of Barr Lake and Milton Reservoir.

You can learn more about the lakes and what is going on in the watershed by going to www.barr-milton.org.

Contact Amy Conklin, watershed coordinator, at amy.conklin@comcast.net or 303-795-5925.

Cooperation, Involvement, and Awareness

Water Quality Stats (as of 02-12-20)

Maximum Depth: 24.6 feet (dam outlet) Water Temperature: 36.8° F (taken 3 feet below surface)

Water Clarity: 3.3 feet (≥ 3 feet is good) Dissolved Oxygen: 142.9% (>80% is good)

pH: 9.63 (between 6 and 9 is good) Chlorophyll-a: >50 ppb (How green, ≤ 25 is good)

Milton Reservoir (Winter TP, refill depth, & Chl-a)
